Current Status of All Claims in Application/ Amendments

1 (currently amended). A process for making a polymer dispersion, comprising

- (a) forming a mixture of an isocyanate-terminated prepolymer substantially devoid of acid or ionic groups and at least one monomer having at least one site of polymerizable carbon-carbon unsaturation and which <u>monomer</u> is a liquid or solid at room temperature, the prepolymer being soluble in the monomers at the relative proportions that are present;
- (b) dispersing the mixture into an aqueous phase under conditions sufficient to form an aqueous dispersion of a plurality of stabilized droplets that have an average diameter of no greater than about 1000 nm and contain both the prepolymer and the monomer(s), and
- (c) subjecting the dispersion from step (b) to conditions sufficient to polymerize the monomer(s) and chain-extend said prepolymer in a single step to form a plurality of hybrid polymer/polyurethane particles having an average diameter of no greater than about 1000 nm dispersed in said aqueous phase, and wherein the hybrid particles have a particle size that differs from the size of the stabilized droplets formed in step (b) by no more than 10%.
- 2 (original). The process of claim 1 wherein the aqueous phase contains water and at least one external surfactant.
- 3 (original). The process of claim 2, wherein the isocyanate-terminated prepolymer contains from 1.8 to 4 isocyanate groups/molecule and has a weight per isocyanate group of 500 to 3000 daltons.
- 4 (original). The process of claim 3, wherein the monomer(s) has a solubility in water at

60825A -2-

25°C of less than 2 grams/liter.

5 (original). The process of claim 4 wherein the mixture of prepolymer and monomer has a viscosity of no greater than 1000 cps (1 Pa•s) at 25°C.

6 (original). The process of claim 5 wherein the prepolymer is water-dispersible.

7 (currently amended). The process of claim 6, wherein the prepolymer is the reaction product of a polyisocyanate and a <u>mixture of a polymer containing oxyethylene groups and one or more other isocyanate-reactive materials, the mixture having an oxyethylene content of from about 5 to about 25% and a polymer of propylene exide and/or ethylene exide.</u>

8 (original). The process of claim 5 wherein the droplets have an average diameter of no greater than 300 nm.

9 (original). The process of claim 8 wherein the prepolymer is chain-extended with water.

10 (original). The process of claim 8 wherein the prepolymer is chain-extended with water and a water-soluble auxiliary chain extender.

11 (original). The process of claim 5 wherein a costabilizer having a solubility in water of less than 10^{-5} g/liter is used.

12(original). The process of claim 8 wherein the surfactant is a mixture of an anionic and nonionic surfactants.

13 (canceled).

14 (original). The process of claim 1, further comprising the step of, after step (b) and before step (c), dissolving a gaseous monomer into the aqueous dispersion under conditions such that the gaseous monomer diffuses to the stabilized droplets.

60825A -3-

USSN 10/015,815

- 15 (original). The process of claim 14, wherein the gaseous monomer is butadiene and the liquid or solid monomer comprises styrene.
- 16 (original). A dispersion of polymer particles prepared in the process of claim 1.
- 17 (original). A dispersion of polymer particles prepared in the process of claim 5.
- 18 (original). A dispersion of polymer particles prepared in the process of claim 14.
- 19 (currently amended). A dispersion of polymer particles in a continuous aqueous phase, wherein the polymer particles are hybrid particles of a polyurethane and a polymer of a monomer having at least one site of polymerizable carbon-carbon unsaturation, further characterized in that the polymer particles have an average diameter of less than about 1000 nm and exhibit a core-shell morphology on transmission electron spectroscopy, in which the particles have a core portion rich in the polymer and a shell portion that is rich in the polyurethane.
- 20 (original). The dispersion of claim 19 wherein the monomer includes an acrylic ester.
- 21 (original). A film made by coagulating or drying the dispersion of claim 19.
- 22 (original). A film made by coagulating or drying the dispersion of claim 16.
